

SiMX is a trusted partner

SiMX is a software development company based in Princeton, New Jersey with more than 20 years of experience in building software components, data processing automation and custom application development. Our consistent level of performance and quick customer response has resulted in a satisfied client base that ranges from small businesses to Fortune 500 companies.

Kris Ernst
Managing Director
Cornerstone Strategic Partners

Having been a long time user of Monarch, I was skeptical that there could be better software available for performing complex data analysis. After using TextConverter for a while, I continue to be amazed at its data extraction and report building capabilities. It's ease of use in building templates that can extract data correctly from reports with non-standard layouts has to be seen to be believed.

In addition, the level of support SiMX provides their customers after purchasing TextConverter to help them learn the product while using the customer's actual data is impressive in today's world of all too common poor customer service experiences. Great job SiMX. Monarch has met its match!

Michael G. Montgomery
Division Reporting Analyst
HCA Central & West Texas Division, IT&S

TextConverter is the most powerful application I have ever seen for extracting data from PC documents. Any data that is possible to extract can be captured by TextConverter because of its powerful logic and ultimate flexibility for this purpose. The new user interface makes it possible for anyone to take advantage of the power of this application. SiMX personnel are always very friendly and eager to help me whenever I call upon them to resolve issues in using their applications, and their resolutions have always exceeded my expectations.

Leigh Offord

Project Manager at CACI
International Inc.

At CACI we support government and military customers in their day-to-day business processes. We had a customer that received data via an excel form and needed that data to be read into a database and then manipulated. We needed a tool that was affordable, high quality and easy to set up. We found SIMX and have been very happy with the results. SIMX services assisted us in setting up the tool and ensuring the programs we wrote worked and solved our business needs. They are very responsive and always provide us solutions quickly ensuring very little downtime for our customers which is extremely important to us. The benefits using this tool have provided our clients are very great. Our customers used to have to manually enter data from this excel form weekly which could have up to 1000 rows. Manual data entry not only takes a great amount of time, but it also is very prone to user errors. Now the client just has to forward the spreadsheet they receive via email and the data is parsed via SIMX and loaded into their database so they can use it instantly. Since the initial set up, we have found numerous other ways to utilize this tool to improve business processes for our clients and look forward to our continued use and continued satisfaction.

Jason Kalisher

Director of ID at Gym

I have used Monarch for many years - and had to upgrade but was looking for a more advanced and simpler solution for extracting "Gold" from various reports and PDFs. A Web search took me to TextConverter 4 SiMX. I was immediately sold. I first acquired the trial version and after a few hours I hit the ground running. I knew that this was far and beyond what I expected and so I purchased the license that very same day. The support I received was one on one and was, what I would classify from my 30 years of IT experience, VIP. Those who know how to use this increase the value to themselves and there company. This is an essential tool for any IT Department. Highly recommended, reasonably priced, well supported = win win win.

Kristen Metzger
President
Smyyth LLC

For more than seven years Smyyth's business processes have relied on the SiMX technology backbone for data retrieval, extraction, consolidation, and reporting. The fully automated procedures collect data from third party sources including carrier APIs, web pages, emails, and flat files.

The extracted data is cleaned, transformed and the system matches against existing data, adds missing information, and updates records. Reports are customizable and delivered automatically over our web portals or by email. It's a great product, and only matched by the quality of SiMX's support.

Neil Myers
President
Connect Marketing

We have been a customer of SiMX for many years. We use both their TextConverter product as well as their services to build custom applications. For example, we use their solutions to find online press coverage of our clients on a daily basis. Using SiMX saves us time, money and makes the process much more accurate than our old manual methods. Our analysis has shown their solutions paid for themselves within the initial 90 days of use.

As a vendor, SiMX is very responsive and has a high degree of integrity. We consider them an important partner.

Piro Dhimitri

Senior Associate at PwC
Canada

Thank you very much for your quick response. I have to tell you, TextConverter is an amazing piece of software. I'm still evaluating the software, but this has blown me away within the first few minutes.

Overall, I am a senior consultant with PwC (a consulting/audit firm) and the amount of data we get in PDFs is ridiculous and this piece of software is impactful. I have tried Datawatch and believe me, it's nothing compared to this.

Jaime Ramirez
Administrative Specialist
Del Sol Medical Center

I have been using this new upgraded version of Text Converter for the past month and a half now and really enjoy the changes that have been made to this software package to make it user friendly to common PC users and not just programmers. I struggled with the logic involved in writing script, so when I was given this new release and shown the ease of striping reports by just highlighting the fields that I am interested in without having to call you for assistance with each new project sent my way.

I have been able to extract detailed hospital master log reports with an efficiency that could not have been accomplished with Monarch. This new software is going to help reduce countless hours of Tech time having to review these reports looking for specific cases and results.

SIMX solutions met the standards to streamline the data transformation process that takes place when importing disparate file formats into various firms' applications.

The TARGET suite development tools is totally integrated with the .NET framework, and we are currently using an in-house SIMX application with another ASP.NET Web application for the escrow department; we are very satisfied as a client with the technical support and their prompt responses to problem resolutions, and their guidance in the data conversion process. Their technical staff goes above and beyond to exceed client's expectations; we strongly recommend SIMX Software Solutions to be your Data Extraction and Processing platform.

Over the past decade I've owned and operated telecom and cable TV service providers, systems integration firms and built multiple professional service teams. I have hired dozens of professional services organizations and done business with some of the world's largest engineering entities. Of the relationships created, I view the one that we've established with SiMX as one of the most valuable and genuine.

I offer my most sincere recommendation of SiMX based not only on the impressive technical feats that I have witnessed, but rooted by the honesty, sincerity and exceptional business acumen exhibited by the SiMX development and support teams.

My first experience with SiMX was early in 2012 when pressed against a deadline and feverishly hunting for a solution. We hired and fired two other firms who were unable to deliver and was about to abandon a complex data mining project that would forever change the landscape of an industry. We had tens of thousands of pages of information, each contained data of various sorts and formats but what we needed was uniformity and a relational database. After months of hamming and spending thousands of dollars in professional services and consulting contracts with other firms, no one else was able to deliver.

Unwilling to give up, we searched for a firm who could overcome the issues, address the known obstacles and deliver a solution. We contacted a dozen organizations that day, then, we found SiMX.

I had a return call from a SiMX Solutions Expert in minutes; the next day a lead developer vetted their ability to accomplish the project as I watched in real-time. SiMX's customer service is top drawer. Our first project with SiMX was completed on time, on budget and with impeccable accuracy. We needed a few more passes on the data structure to fit our system and they obliged with dispatch. Where every other partner was over-budget and incapable SiMX simply and expertly delivered.

We were notably impressed with SiMX's professionalism, responsiveness and detail so we presented a data acquisition and reporting project of mammoth proportions.

The team approached the opportunity with clarity and a level of engagement you don't typically find with contractors. They embraced the strategic, philosophical and technical aspects with a high degree of sophistication and skill. It's been a year since we commenced on the project; it's evolved tremendously in form and function due to the excellent working relationships and friendships established over time.

We fully trust SiMX to deliver on time, as promised and without excuses. Their practical and direct approach streamlines our costs and our solutions. Their results continue to exceed our expectations.

We have concurrently scoped and delivered other projects as well; one in particular speaks volumes to the character of the team at SiMX: It was the Friday before Christmas; with only days until the New Year a client approached me with an emergency. They needed years of medical records, charts and customer data extracted and imported into a new system but they could only produce PDF reports from the old system. Their data was locked in a system about to be decommissioned and all the while their operation must remain in service 24/7.

We did not have the time to fully scope and estimate this project; the business deal between SiMX and our company was negotiated on trust. SiMX director Andrei Afanassenkov simply stated: "you pay not for effort, only for results". He then approached the challenge calmly and professionally; within days all data was extracted, reassembled into multiple iterations of new databases and a User Interface was created to fully support the transition for staff. With the combination of our company and SiMX the entire project was "turn- key" and the client was delighted. Once again SiMX made us look very good.

We work with SiMX on a regular basis, often communicating daily on a number of items and projects. Their level of service and responsiveness has been consistently excellent.

I strongly encourage you to consider the SiMX team for your complex data acquisition, reporting, software and/or application development needs.

Drew Zabrocki

Centricity, LLC

We have recently started using the Simx software to handle complex hierarchical text file conversions. We have selected SiMX because of its ability to recognize complex document patterns and to automate labor and time intensive data format conversions and data integrations between multiple applications. In a short period of time, SiMX has already proven to be a huge cost saver for our organization when it come to the handling of accounting, financial, payroll and human resources data. The software was easy to install and it came equipped with many examples that we could use to jumpstart projects. Last but not least, the technical support that we have received from SiMX team has been outstanding. One cannot hope for better assistance and help. To make a long story short, we like the product and the peoples and we hope to partner with Simx for many years to come.

SiMX features an efficient, helpful GUI and makes parsing report data easy. We use TextConverter for parsing a myriad of formats into our database. Their customer service is spot on, regardless of how techy you are. I typically get responses to my emails inside of ten minutes.

Ben Helder
Database Developer
CAPITAL Services Inc.

My company "Quality Letters of Credit" receives hundreds of PDF documents every month - letters of credit, air way bills, ocean bills of lading, etc. I used to have several employees rambling through incoming emails, opening attachments, finding/creating the corresponding records in the database and retyping the information. All those inconveniences are gone now. SiMX 4R solution automatically searches emails, extracts data from attachments, determines the type of data, and updates the database - no manual intervention is required. My employees freed from the dreary task can now fully focus on the business processes and customer satisfaction. SiMX is my trusted IT partner and I have no hesitation in recommending it to anyone.

David W Clements
President
Quality Letters of Credit, Inc.

The combination of a strong collection business and a weak economy meant that we were receiving hundreds of bankruptcy notices, dismissal, and discharges from judicial regions in all 50 states every day. Five full time employees were involved in keying in the bankruptcy information. Looking for a better solution we called six different vendors that offered these types of automation solutions. After seeing the bankruptcy forms, all six turned us down. SiMX was the only vendor that offered a credible solution. The SiMX automated process reliably extracts clean structured data from exceptionally diverse and inconsistent layouts and formats. I am very impressed with the services and the technical ability of SiMX team.

Stephen Florczak
Executive Vice President of IT
Capital Management Services, L.P.

Our IT platform utilizes the SiMX 4R solution for the automation of daily data processing and reporting. The customized system gathers data from various sources (flat files, web pages, real time feeds, etc.) and consolidates the information for reporting. It creates executive, performance, and analytical reports which are delivered to subscribers over the web or via emails. The platform is fully automated and executes with great precision.

SiMX has provided us with data processing automation services for more than five years. The SiMX support team has always demonstrated exceptional professionalism and responsiveness.

Alexander Shushkovsky

Director of Applications Development
Rodman & Renshaw, LLC

Our partnership with SiMX has become integral to our success in improving efficiencies and resource management as a company. The training they provided enabled us to rely heavily on the software which we found to be user friendly and, when we needed support, they have proved to be very knowledgeable and responsive.

Relative to other data management systems, SimX compares very favorably and we remain very pleased with our partnership with SimX and the great people there who have been supporting our efforts all along the way.

Brenda Cwierz
Project Manager at Ocean Media

Thank you so much for your software, samples, and help! I have used the Monarch program in the past and was considering upgrading to the latest version. When I saw your program and demoed it I thought that it was too good to be true. You have simplified the process and made it so intuitive that even a novice could use it. When I received the video of how you connected the fields it validated the power of your program. I am sold and intend to share my enthusiasm with anyone who wants to succeed in parsing large reports, or data to something very manageable.

William H. Bradley, JD

Chief Financial Officer
Classic Concepts

I have been evaluating the trial version of SiMX TextConverter 4.5 for a few days. I have generally found it to be the most powerful program of its kind. It is in many ways much more useful and user friendly than the Datawatch Modeler and the Import Wizard for TeamMate Analytics (formerly known as Wolters Kluwer's TopCAAT Excel add-on) programs that I also use for data extraction..

Aldrenza Wright

After viewing and testing many different text conversion software packages, we found SiMX Text Converter. Not only was it simple to use, but the support we received from the first interaction was amazing.

Dave Slattery
eResourcePlanner, Inc

TextConverter more than paid for itself on the very first project we used it on. In fact, it made the project possible when it otherwise probably wouldn't have materialized.

Ron Calzone
Missouri Citizens for Property Rights

I'm thankful to have found your product and was very surprised (in a great way) to experience your extremely prompt service, which has already been a lifesaver. I actually don't know what you could have done better and I'm still almost in awe regarding how your operations handled my requests.

Patrick Corley
System Consulting Group
